

Description of Science Form 3 Textbook Cover

The design of the Science Form 3 textbook cover combines four themes and the learning areas of science, namely:

- Theme 1: Maintenance and Continuity of Life (Biology)
- Theme 2: Exploration of Elements in Nature (Chemistry)
- Theme 3: Energy and Sustainability of Life (Physics)
- Theme 4: Earth and Space Exploration (Space Science)

Its presentation uses the semi abstract method, which is a chain of colourful polygons containing photographs of the four themes of science. The Photoshop and Illustrator software is used to create the 2D and 3D composition on the cover.

The elegant white and yellow are the main colours chosen for the typeface of the book title. It is clear, bright and easy to read. A grey background is used to establish a contrast between the colour spectrum and photographs, as well as make the cover look softer and relaxed.
